

## 1 MILLION COVID-19 DEATHS AROUND THE WORLD

Total Covid-19 Deaths from January 2020 to November 2020

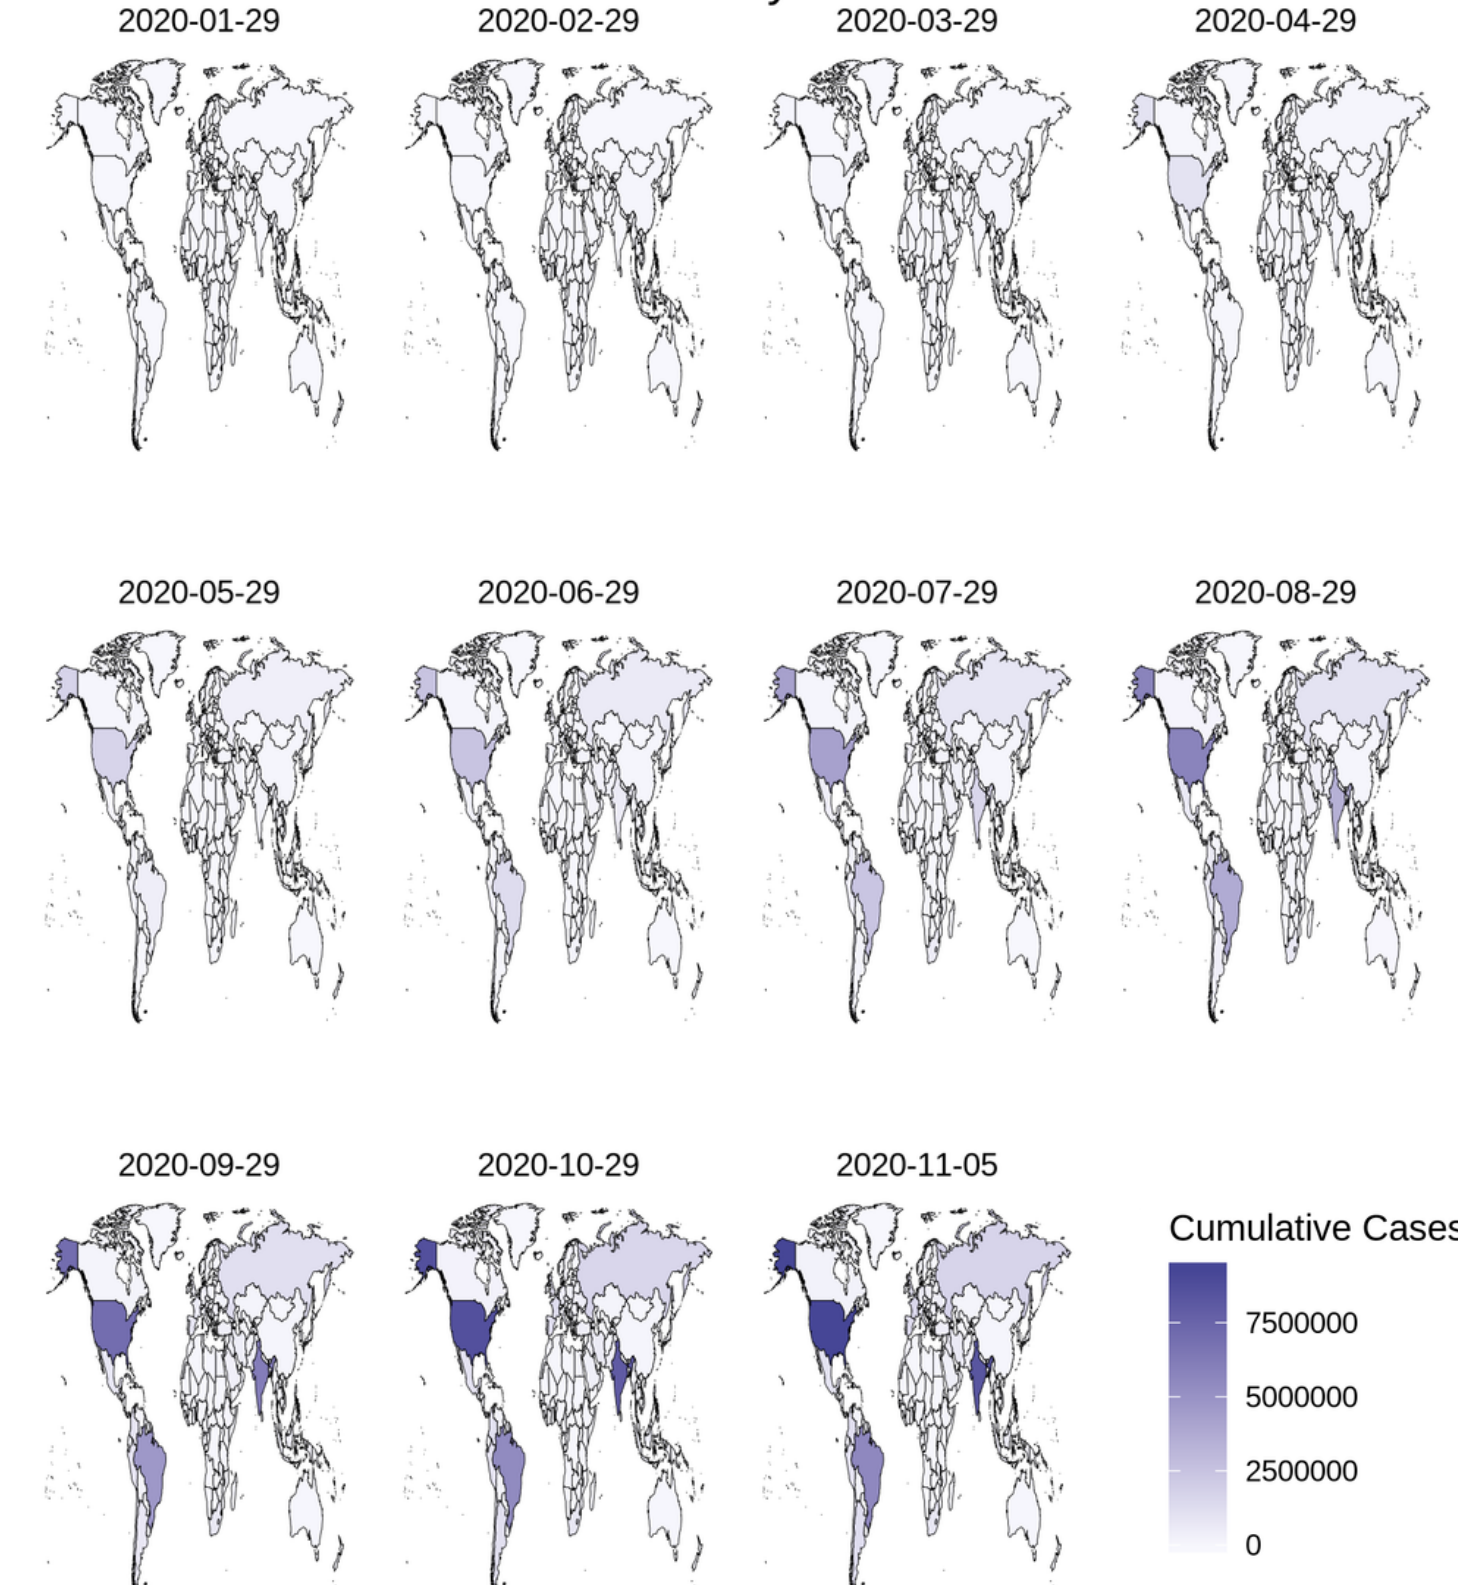

Coronavirus disease (COVID-19) is an infectious disease caused by a newly discovered coronavirus. According to WHO, Most people infected with the COVID-19 virus will experience mild to moderate respiratory illness and recover without requiring special treatment. **Older people, and those with underlying medical problems like cardiovascular disease, diabetes, chronic respiratory disease, and cancer are more likely to develop serious illness.**

## 50 MILLION COVID-19 CASES AROUND THE WORLD

Total Covid-19 Cases from January 2020 to November 2020

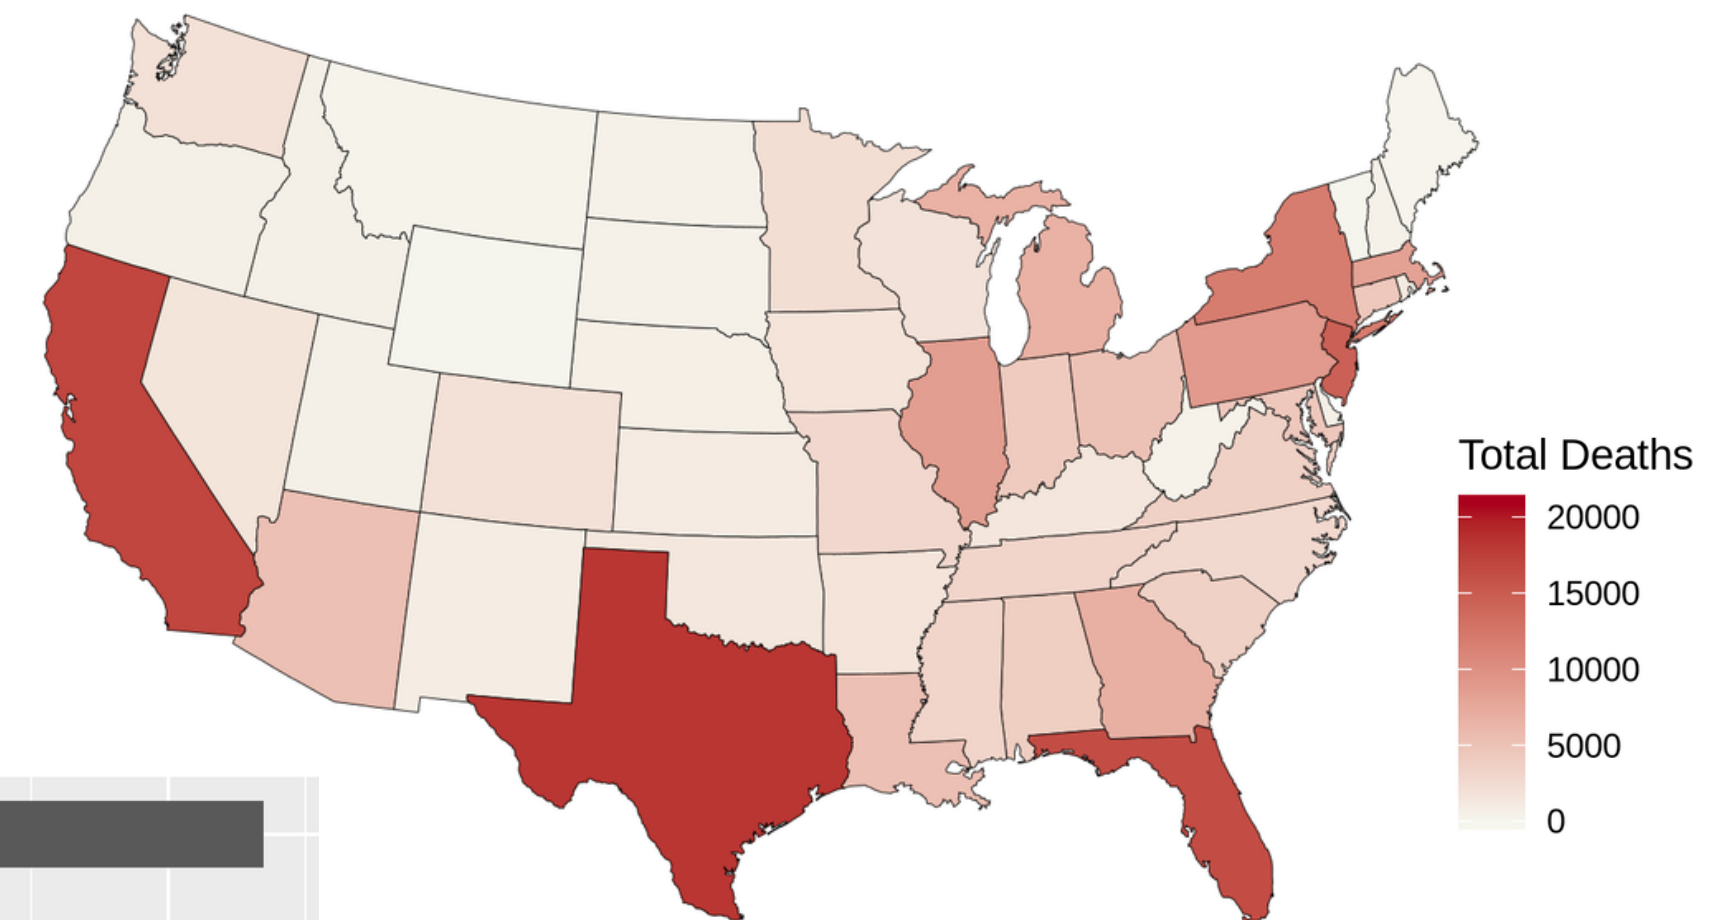

This virus started in late 2019 and it spread all around the world really fast. Each country tried to control the spread in different ways but most of them were not successful and we can see that new cases are increasing dramatically day by day but **who is in danger?**

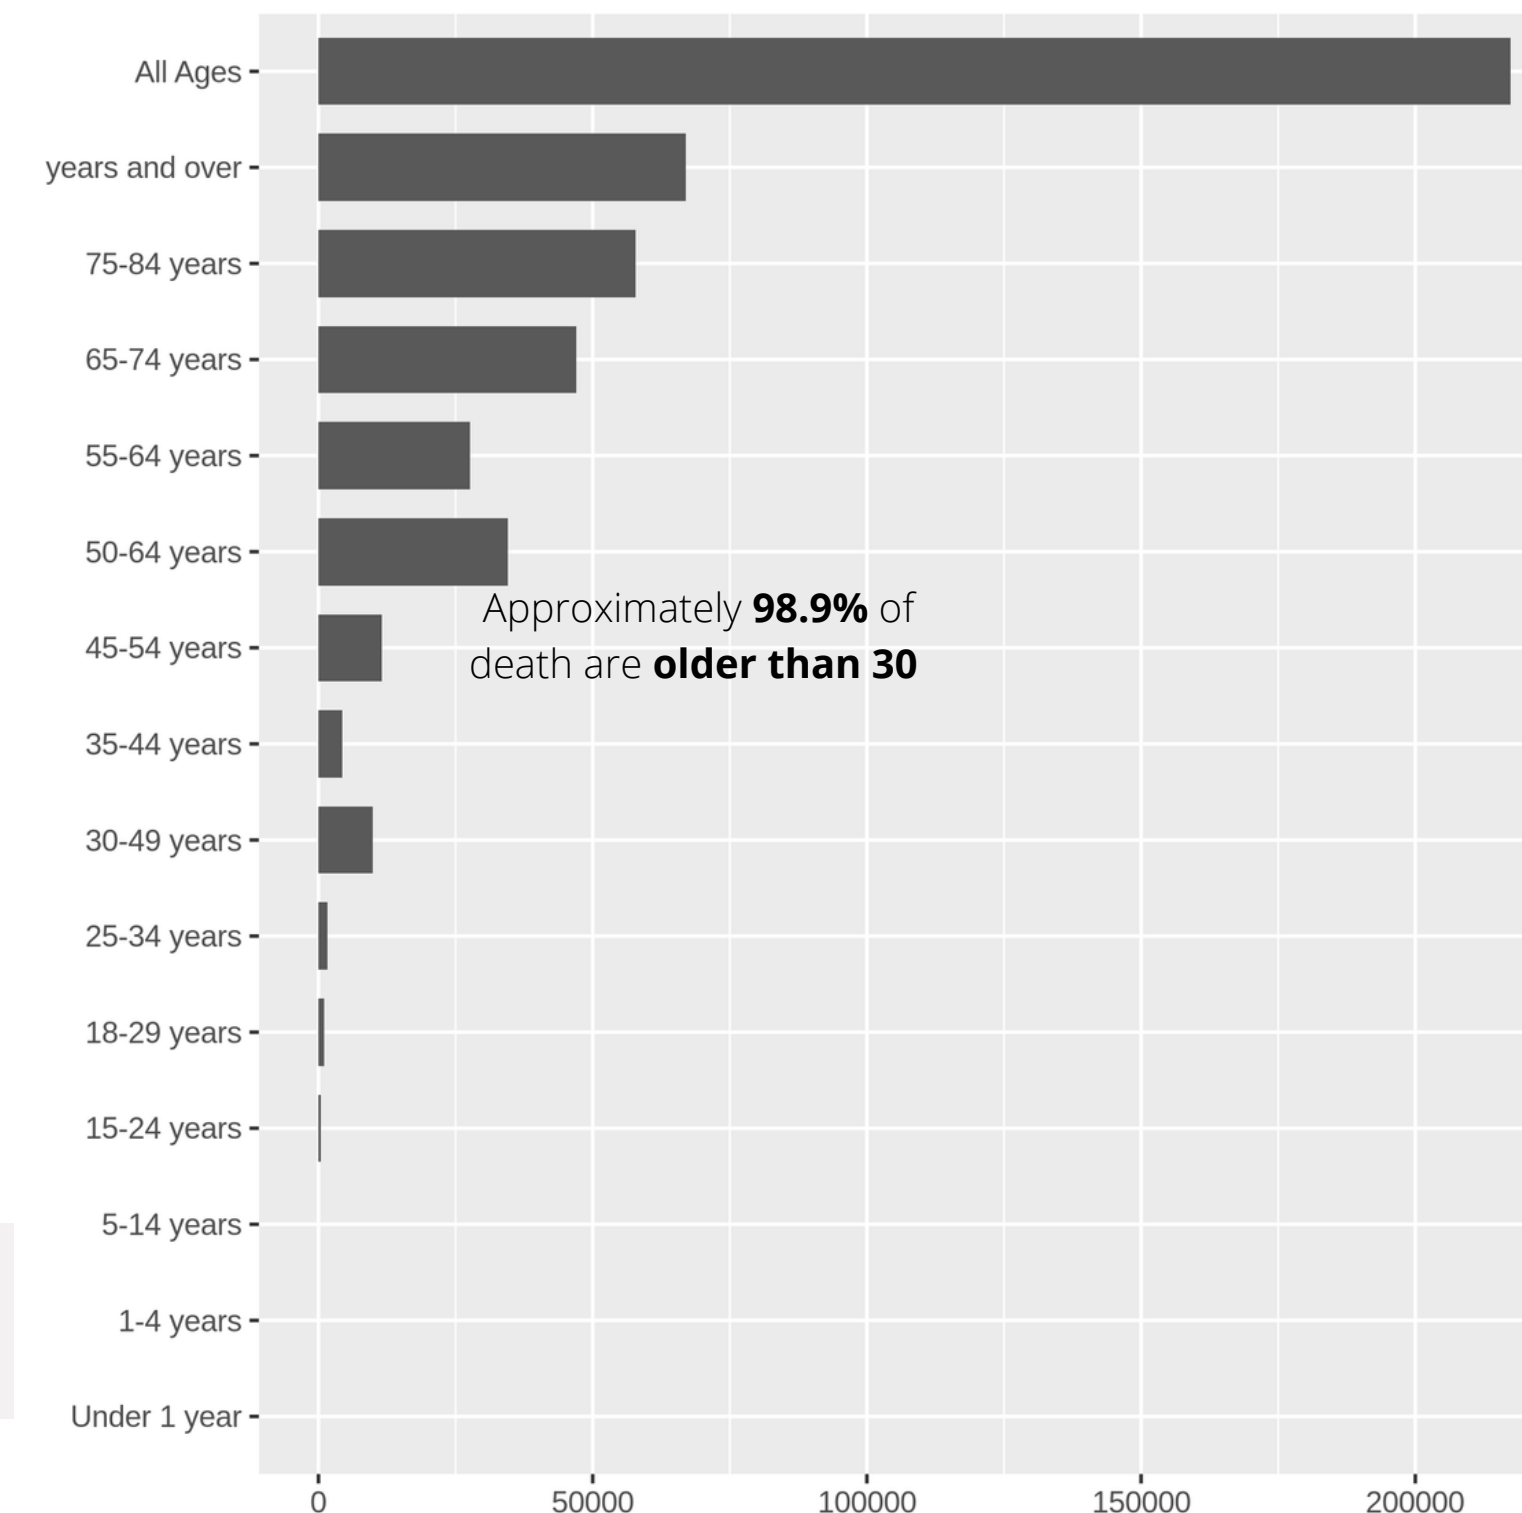

## COVID-19 IN UNITED STATES OF AMERICA

The first confirmed case of the virus in the United States was discovered on January 21, 2020, six months ago. The infected individual was a man in his 30s from Washington state. On March 17, 2020, confirmed cases of the virus had been reported in every state.

Total Deaths in Different Age Groups in the USA

Right now, the United States has the most deaths and cases around the world, and these numbers are increasing each day. According to WHO, older people, and those with underlying medical problems such as cardiovascular disease, and chronic respiratory disease are more likely to develop serious illnesses.

On the left side, you can see a bar graph that shows the total deaths in different age groups in the U.S. The first bar in the graph presents all age groups, which means total deaths in the U.S. Statistics show us that the majority of deaths occur in people over the age of 30. **Older the age higher the risk of death.**

When we look at the below graph, we can see total deaths for different age groups and gender. When we compare two genders, there is not a big difference between them, but we can say that number of male deaths is more than female deaths.

Total Deaths in Different Age Groups and Gender in the USA

In conclusion, the number of covid cases and deaths are increasing dramatically day by day, especially in the United States. If we can't control this spread, we will be risking people's lives who are older than 30. There are five basic things that every citizen has to do to prevent the spread. Which are maintain a distance of at least six feet between you and other people, cover your coughs and sneezes with a disposable tissue, clean and disinfect high-touch surfaces every day, avoid touching your eyes, nose and mouth, and wash hands often with soap and water for 20 seconds, or use sanitizer containing 60% alcohol. These five things will decrease the spread of this virus so that we may able to protect the people who are older than 30.
